1. AIM

To design and develop a Recruitment Dashboard using Zoho Creator to display the total number of job applications, visualize recruitment statistics through charts, and provide access to candidate application records in a centralized interface.

2. PROCEDURE

Step 1: Create the Dashboard Page

Opened the Recruitment & Job Application Management application in Zoho Creator and created a new page named **Recruitment Dashboard** under the Design section. This page serves as the main interface for displaying recruitment statistics and candidate records.

Step 2: Add the Total Applications Panel

Added a Panel component to the dashboard and configured it to retrieve the record count from Job_Application_Form. The panel displays the total number of submitted job applications, providing a quick overview of recruitment activity.

Step 3: Create Applications by Department Chart

Added a Donut Chart to visualize the distribution of applications across departments. Configured Department_Applied_For as the category field and Count as the aggregate value. This chart helps users understand how applications are distributed among departments.

Step 4: Create Applications by Employment Type Chart

Added another Donut Chart to represent applications according to employment type. Configured Employment_Type_Preferred as the category field and Count as the aggregate value. The chart displays the distribution of candidates' employment preferences, such as full-time, part-time, and internship positions.

Step 5: Create Applications by Experience Chart

Added a Bar Chart to visualize applications according to candidates' years of experience. Configured Years_Of_Experience as the category field and Count as the aggregate value. This chart helps compare the number of applications across different experience levels.

Step 6: Add the Job Application Report

Added the job application report directly to the dashboard to display submitted candidate records. This allows users to view application details alongside the recruitment statistics without navigating away from the dashboard.

24140115

Step 7: Enter Sample Candidate Records

Entered sample candidate details through Job_Application_Form to populate the dashboard. The sample records included candidate names, email addresses, departments, employment preferences, and years of experience.

Step 8: Test the Dashboard

Opened the dashboard in Live mode and verified that the total applications panel, charts, and job application report displayed the expected information. All components were tested to ensure that the dashboard functioned correctly.

3. COMPONENTS USED

S. No.	Component	Configuration	Purpose
1	Panel	Record count from Job_Application_Form	Displays the total number of applications
2	Donut Chart	Category: Department_Applied_For	Visualizes applications by department
3	Donut Chart	Category: Employment_Type_Preferred	Visualizes applications by employment type
4	Bar Chart	Category: Years_Of_Experience	Visualizes applications by experience
5	Report	Job application report	Displays submitted candidate records

24140115

4. OUTPUT

The Recruitment Dashboard was successfully developed using Zoho Creator. It displays recruitment statistics through a count panel and charts and provides direct access to candidate application records.

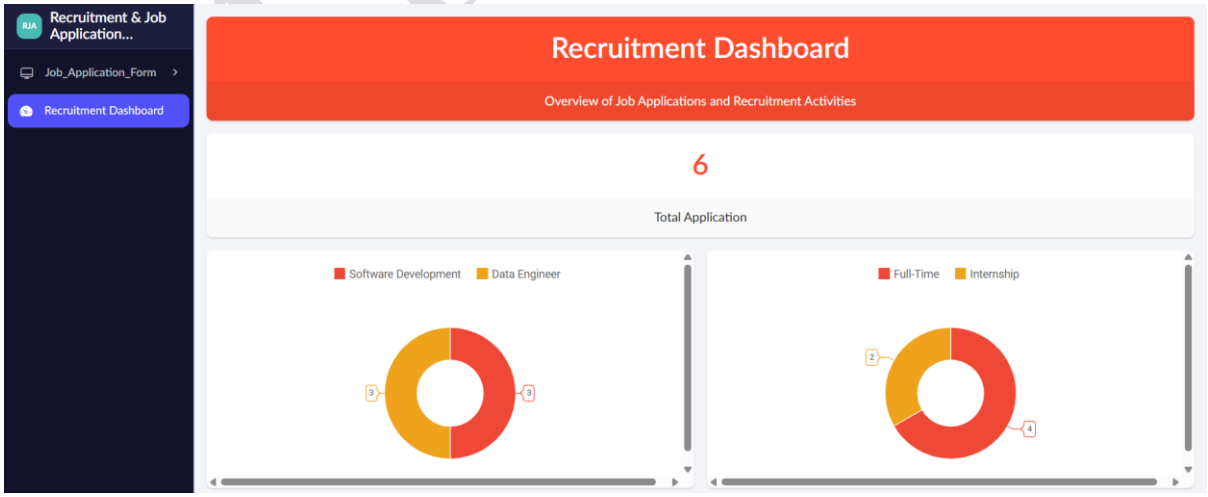

Dashboard Output

S. No.	Dashboard Element	Output
1	Total Applications	Displays the total number of application records
2	Applications by Department	Donut chart showing applications across departments
3	Applications by Employment Type	Donut chart showing employment preferences
4	Applications by Experience	Bar chart showing applications grouped by experience
5	Job Application Report	Displays candidate application details

Output Screenshots

Screenshot 1: Recruitment Dashboard

The screenshot should display the total applications panel, both donut charts, the experience bar chart, and the job application report.

Screenshot 2: Job Application Report

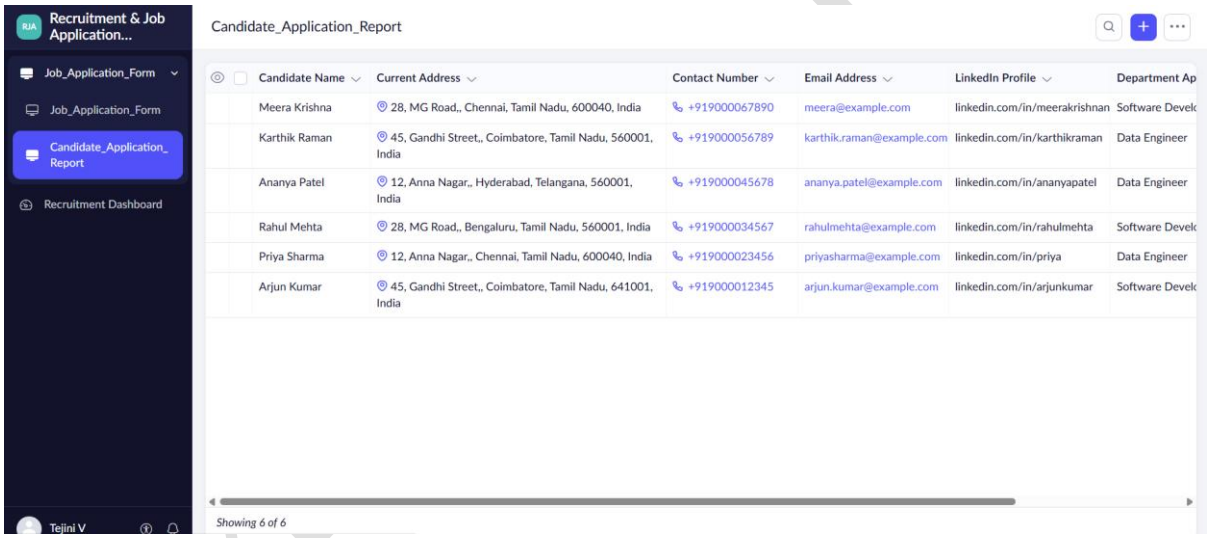

Figure 2: Job Application Report displaying submitted candidate details.

5. RESULT

Thus, the **Recruitment Dashboard was successfully designed and developed using Zoho Creator**. The dashboard displays the total number of job applications, visualizes recruitment statistics using donut and bar charts, and provides access to candidate records through the job application report. All components were tested successfully in Live mode.
