Exp. No. 11

APPLICATION DEPLOYMENT AND MIGRATION IN ZOHO CREATOR

Job Application Form

241401115

Prepared by: Tejini V

Register Number: 241401115

Department: Computer Science and Business Systems

AIM

To deploy and migrate a Zoho Creator application (**Job Application Form**) across the Development, Stage and Production environments using the Environments feature, and to publish a new version (V2.0) of the application from Stage to Production without affecting the live users.

PROCEDURE

Step 1: Open the Environments page

Log in to Zoho Creator and click **Environments** under the **DEPLOY** section in the left menu. The page shows two columns, **Stage** and **Production**. The *Job Application Form* app has already been added to the environment and is deployed as **Version 1.0** in both Stage and Production, dated Oct 06, 2026. The status **Changes available** below the app name means the Development copy now contains changes that have not yet been published.

Step 2: Make changes in the Development environment

Go to **Applications** on the home page. On the app card, the **Environment** drop-down lists the options for each environment. Choose **Edit** under **Development** and make the required improvements to the application. In this experiment, a new field **Languages known** was added to the *Job Application* form and the **All Job Applications** report was modified. These changes are visible only to the developer until they are published.

Step 3: Select the components to publish to Stage

Open the Environments page, click **Publish** and choose **Publish to Stage**. The *Staging - Publish to Stage Environment* window lists every changed component of the application as a tree. The new **Languages known** field (green marker) and the modified **All Job Applications** report (orange marker) are selected, so **Selected Components: 2** is shown at the bottom. Click **Proceed**.

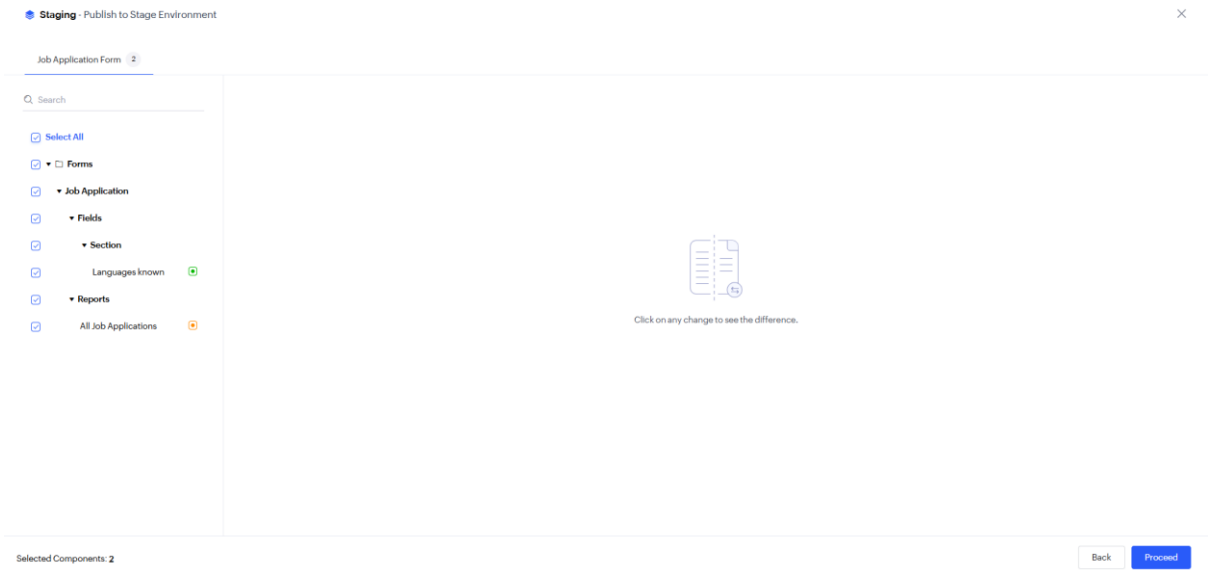

Fig. 2: Selecting the changed components to publish to Stage

Step 4: Publish the changes to the Stage environment

Fill in the following details: **Title** (*version 2.0*), **Description** (*enhanced feature for better application*), **Type** (*Major* for enhancements and updates, *Minor* for minimal changes and bug fixes) and the **Email Notification** address. The right side shows the **Application Versions** table, where the version changes from **V1.0 to V2.0**. A warning states that the application will be in maintenance mode until the publish is complete. Click **Publish**. The publish takes a few minutes and an email is sent when it completes.

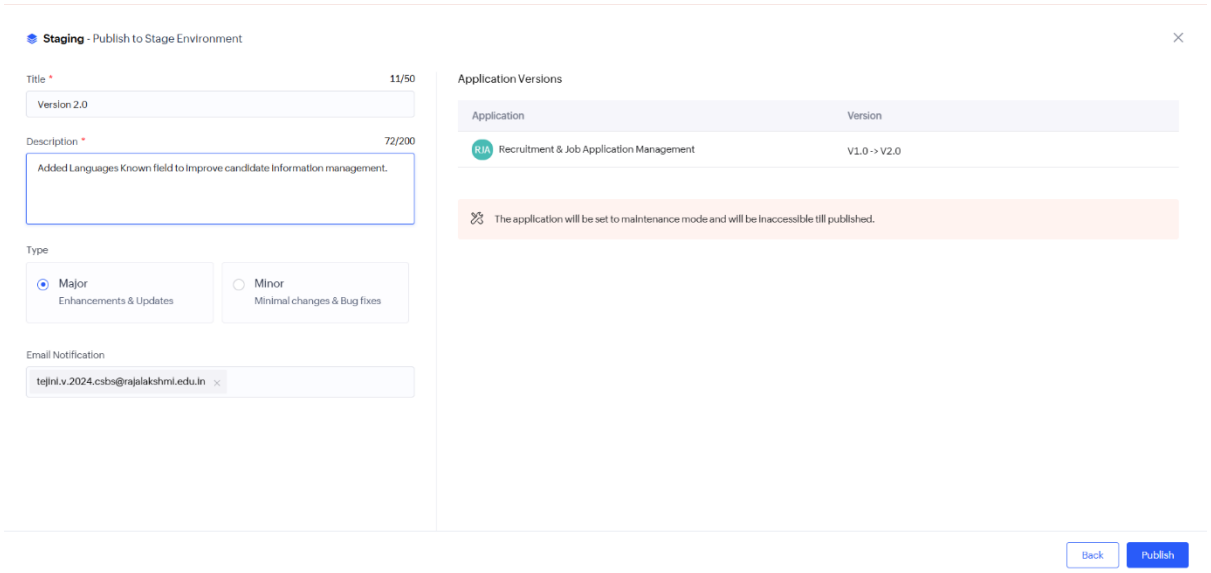

Fig. 3: Publish to Stage Environment dialog (V1.0 ® V2.0)

Step 5: Verify the new version in Stage

Back on the Environments page, the **Stage** column now shows **Version 2.0** while **Production** still shows **Version 1.0**. The status **No changes available** indicates that the Development copy and the Stage copy are identical. The application is tested in Stage at this point, and the live users are not affected.

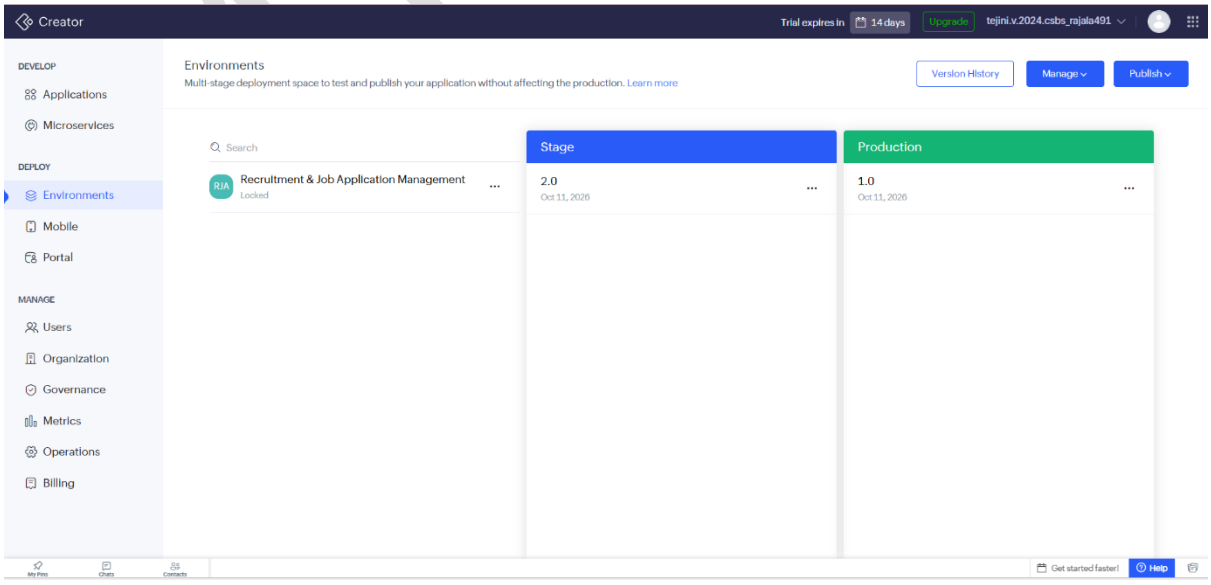

Fig. 4: Stage has Version 2.0, Production still has Version 1.0

Step 6: Publish (migrate) to the Production environment

Click **Publish** and select **Publish to Production**. The *Version - Publish to Production Environment* window opens. Under **Publishing Options**, **Publish Now** starts immediately, while **Publish Later** schedules it for a chosen date, time and time zone (GMT+05:30 Chennai, Kolkata). Enter the e-mail address in **Send Mail Notification**. The **Selected Versions** table shows the version title *version 2.0*, the application version *Job Application Form - V2.0* and its description. Click **Publish**; the application stays in maintenance mode until the publish finishes.

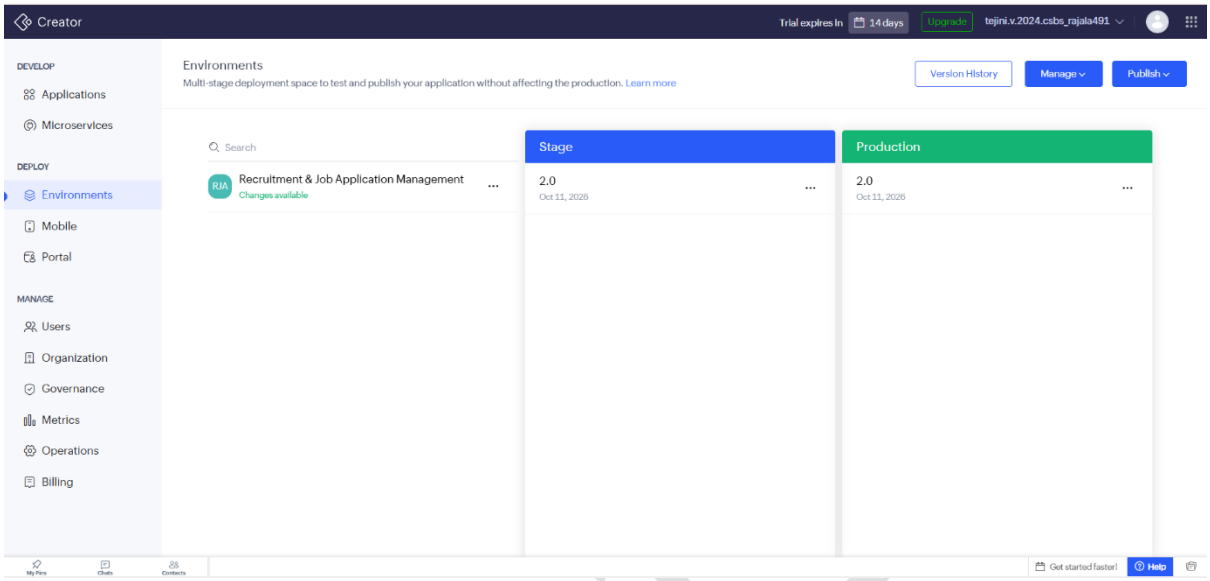

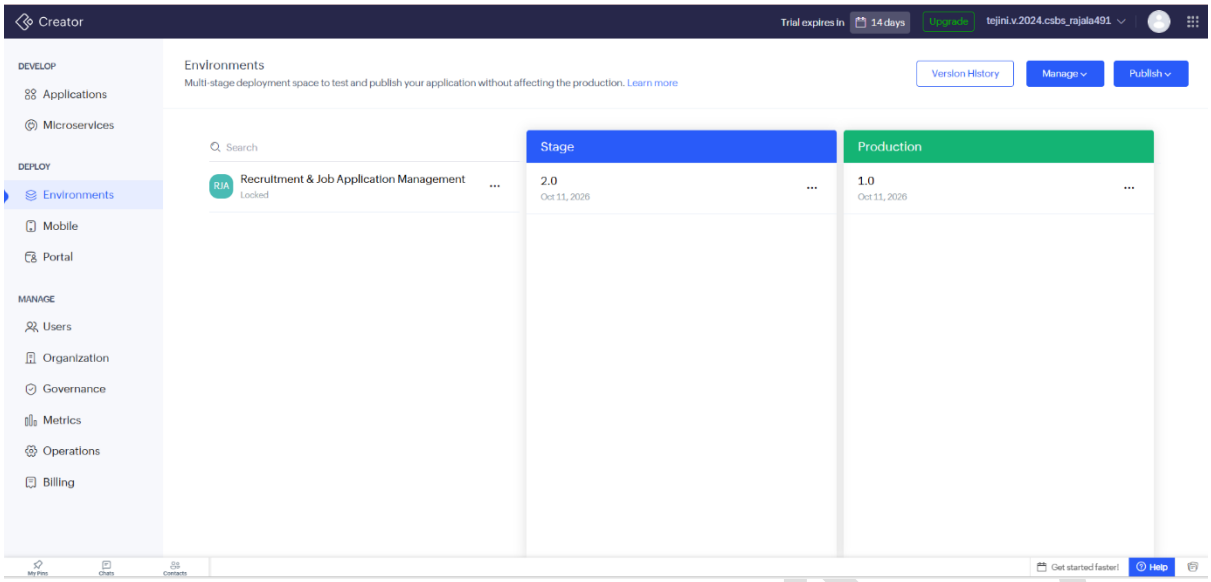

Fig. 5: Publish to Production Environment dialog (Publish Now selected)

OUTPUT

After the Production publish is completed, the Environments page shows the final deployed state of the application.

Output 1: Before migration to Production

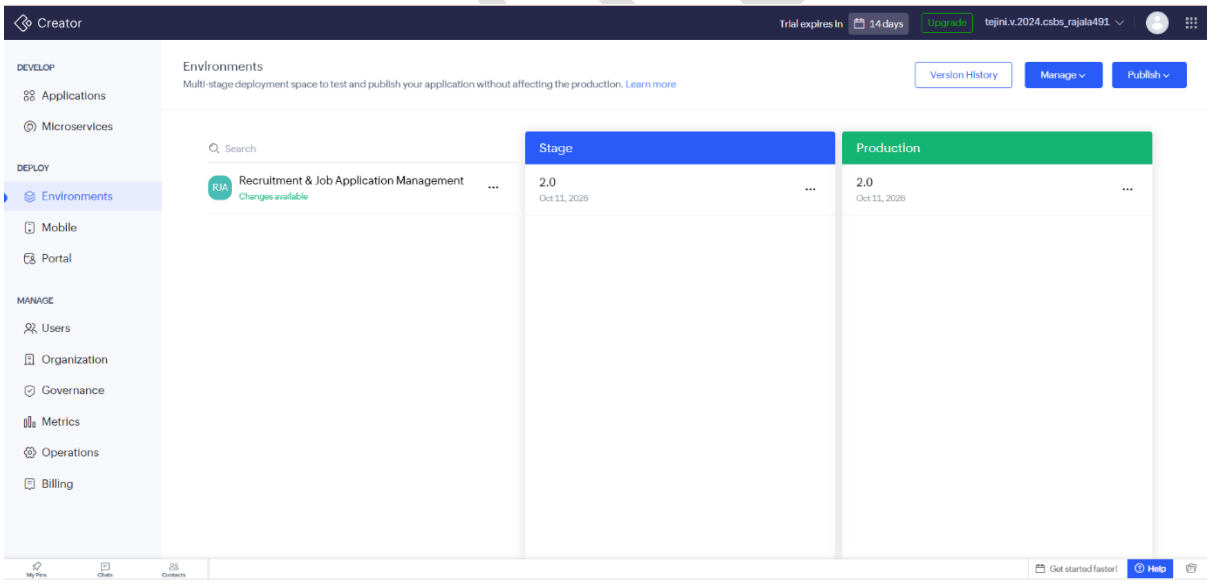

Stage contains **V2.0** (tested version) whereas Production still runs **V1.0**. This confirms that the new changes were first isolated in Stage.

Output 1: Stage = 2.0, Production = 1.0

Output 2: After migration to Production

Both the **Stage** and **Production** columns now display **Version 2.0** dated Oct 06, 2026. This shows that the updated Job Application Form (with the new *Languages known* field and the modified *All Job Applications* report) was successfully migrated from Stage to Production and is now available to the end users.

Output 2: Stage = 2.0, Production = 2.0

RESULT

Thus, the Job Application Form application was successfully deployed and migrated in Zoho Creator. Version 1.0 was first deployed to the Stage and Production environments, the changes were then published to Stage as Version 2.0 after testing, and finally Version 2.0 was publishedto the Production environment using the Environments feature.
