1. AIM

To design and build a functional **"Recruitment & Job Application Management"** application in Zoho Creator that demonstrates the correct usage of all **13 Basic Fields** available in the Form Builder — Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox — and to model the job application workflow through a properly configured form, report view, field validations, and an Entity-Relationship (ER) diagram.

2. PROCEDURE

2.1 Application and Form Creation

- Logged into Zoho Creator and created a new application named **"Recruitment & Job Application Management"**.
- Inside the application, opened the Form Builder and created the **Job Application Form** for collecting candidate and job-related information.
- Created the form with the name **Job_Application_Form**.
- The form was organized into four logical sections:
    - Personal Details
    - Contact & Online Presence
    - Job & Experience Details
    - Interview Scheduling & Consent
- A report was automatically generated to display the submitted job applications.

The application is intended for candidates to submit their details and for the HR recruitment team to review, filter, shortlist, and schedule interviews.

2.2 Drag-and-Drop of Basic Fields

In the Form Builder, the **Basic Fields** palette was expanded from the left panel. Each of the required 13 Basic Fields was dragged and dropped onto the form canvas.

The fields were arranged according to the four sections of the Job Application Form. The required field types were configured to capture candidate identity, contact information, job preferences, experience, skills, interview scheduling details, and background-verification consent.

2.3 Configuring Field Properties

The field properties were configured according to the requirements of the Job Application Form.

- The **Candidate_Name** field was configured using the **Name** field with First Name and Last Name sub-fields.
- The **Email_Address** field was configured using the **Email** field with email-format validation.
- The **Current_Address** field was configured using the **Address** field.
- The **Contact_Number** field was configured using the **Phone** field with Indian country-code format.
- The **LinkedIn_Profile** field was configured as a **Single Line** field.
- The **Cover_Letter** field was configured as a **Multi Line** field.
- The **Years_Of_Experience** field was configured as a **Number** field with a valid range from 0 to 40.
- The **Available_Joining_Date** field was configured as a **Date** field.
- The **Preferred_Interview_Time** field was configured as a **Time** field.

24A01115

- The **Department_Applied_For** field was configured as a **Drop Down** field.
- The **Employment_Type_Preferred** field was configured as a **Radio** field with Full-Time, Part-Time, and Internship options.
- The **Key_Skills** field was configured as a **Multi Select** field.
- The **Background_Verification** field was configured as a **Checkbox** to capture candidate consent.

These configurations follow the field mapping and four-section form layout specified in the Job Application assignment.

2.4 Submitting Sample Records and Reviewing the Report

- The completed Job Application Form was opened in **Live Preview**.
- Sample candidate information was entered and submitted through the form.
- Three sample job application records were submitted for testing.
- The submitted records were automatically added to the generated report.
- The report was reviewed to verify that the candidate and application information was stored correctly.
- The report was configured to allow filtering based on **Department Applied For** and **Key Skills**.
- The report can therefore be used by the HR recruitment team to review and filter applications for shortlisting and interview scheduling.

The assignment requires at least three submitted records in the report view.

2.5 Data Modelling

An **Entity-Relationship (ER) diagram** was designed to document the data model underlying the Recruitment & Job Application Management system.

The central entity is **JOB_APPLICATION**, which contains the application-related information submitted by candidates.

The main relationships are:

- **CANDIDATE → submits → JOB_APPLICATION**
- **DEPARTMENT → has → JOB_APPLICATION**
- **JOB_APPLICATION → generates → APPLICATION_REPORT**

The ER diagram represents how candidate information, job application details, department information, and application reports are related within the recruitment management system.

3. BASIC FIELDS USED

All **13 Basic Fields** available in the Zoho Creator Form Builder were used while designing the Job_Application_Form. The following table describes their purpose.

Basic Field	Field Name	Purpose
Name	Candidate_Name	Captures the full name of the candidate
Email	Email_Address	Captures the candidate's email for communication
Address	Current_Address	Captures the candidate's current residential address
Phone	Contact_Number	Captures the candidate's mobile number
Single Line	LinkedIn_Profile	Captures LinkedIn or portfolio information

24A01115

Basic Field	Field Name	Purpose
Multi Line	Cover_Letter	Captures the candidate's cover letter or remarks
Number	Years_Of_Experience	Captures the candidate's total years of experience
Date	Available_Joining_Date	Captures the earliest date the candidate can join
Time	Preferred_Interview_Time	Captures the candidate's preferred interview time
Drop Down	Department_Applied_For	Allows selection of the department applied for
Radio	Employment_Type_Preferred	Captures the preferred employment type
Multi Select	Key_Skills	Allows selection of one or more relevant skills
Checkbox	Background_Verification	Records consent for background verification

The field names and purposes are based on the supplied Job Application assignment.

5. REPORT VIEW

Every job application submitted through the Job_Application_Form is automatically captured in the generated report.

The report displays the submitted candidate records in a tabular/list format. The report was reviewed using three sample records to verify that the submitted information was correctly stored.

The report also provides filters for:

- **Department Applied For**
- **Key Skills**

These filters support the HR team in reviewing applications based on department and candidate skills. The original assignment specifies that the report should allow HR to filter applications by department and skill set.

6. DATA MODELLING — ENTITY-RELATIONSHIP DIAGRAM

The Entity-Relationship diagram documents the data model underlying the **Recruitment & Job Application Management** system.

- Department_ID — Foreign Key
- Employment_Type_Preferred
- Years_Of_Experience
- Key_Skills
- Available_Joining_Date
- Preferred_Interview_Time
- Cover_Letter
- Background_Verification

DEPARTMENT

- Department_ID — Primary Key
- Department_Name

24140115

APPLICATION_REPORT

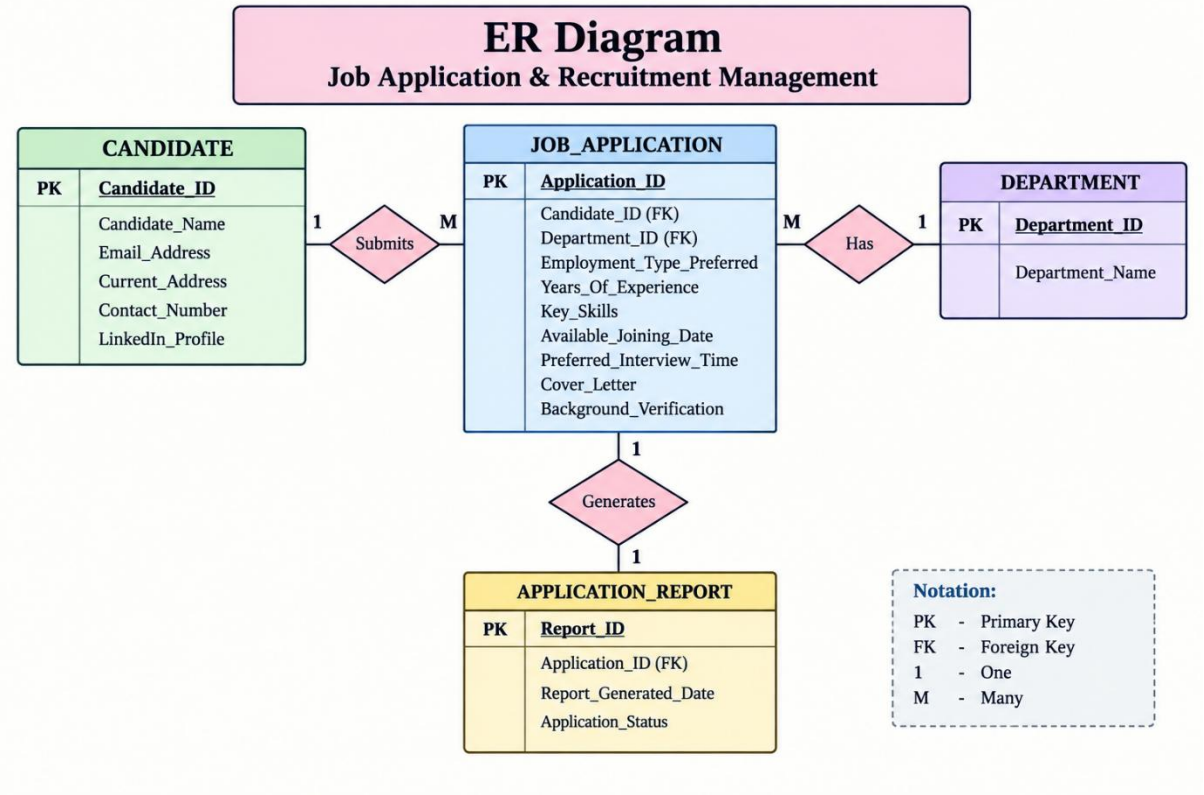

- Report_ID — Primary Key
- Application_ID — Foreign Key
- Report_Generated_Date
- Application_Status

Main Relationships

- **CANDIDATE — Submits — JOB_APPLICATION → 1 : M**
- **DEPARTMENT — Has — JOB_APPLICATION → 1 : M**
- **JOB_APPLICATION — Generates — APPLICATION_REPORT → 1 : 1**

7. OUTPUT

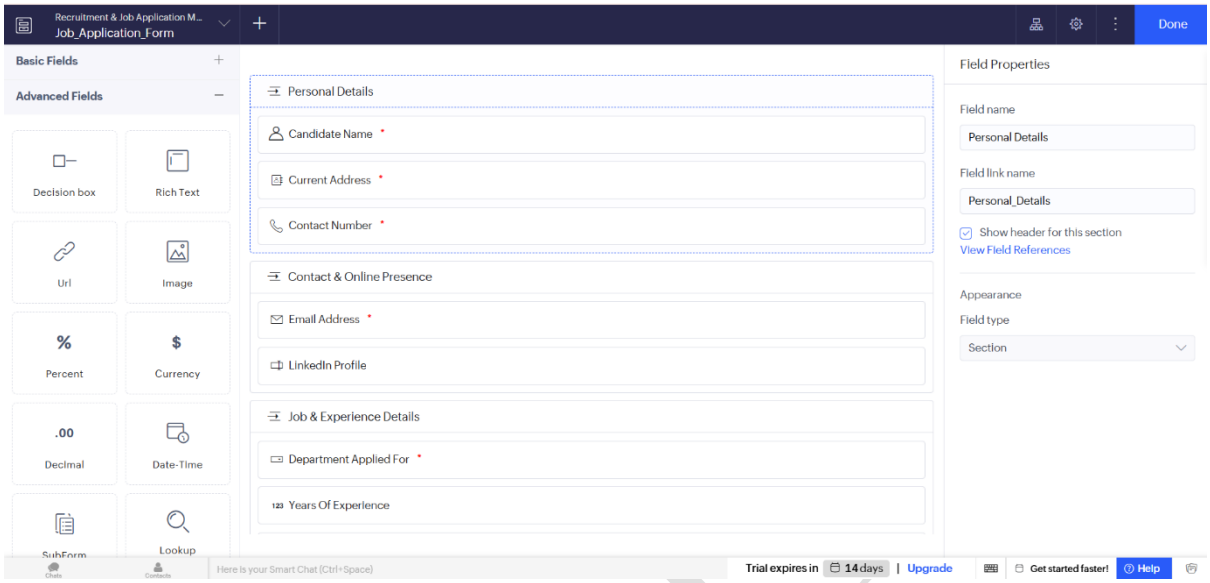

The following screenshots capture the completed **Recruitment & Job Application Management** application in Zoho Creator.

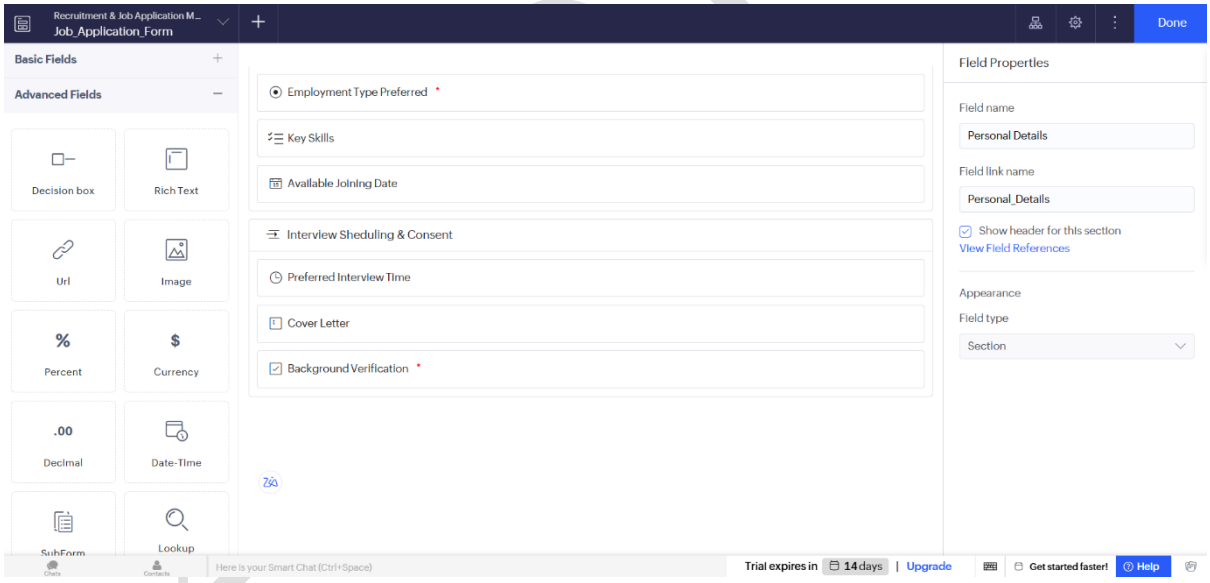

7.1 Form Builder View

Shows the configured 13 Basic Fields arranged across the four sections of the Job_Application_Form.

Fig. 1. Form Builder View — Configured Basic Fields

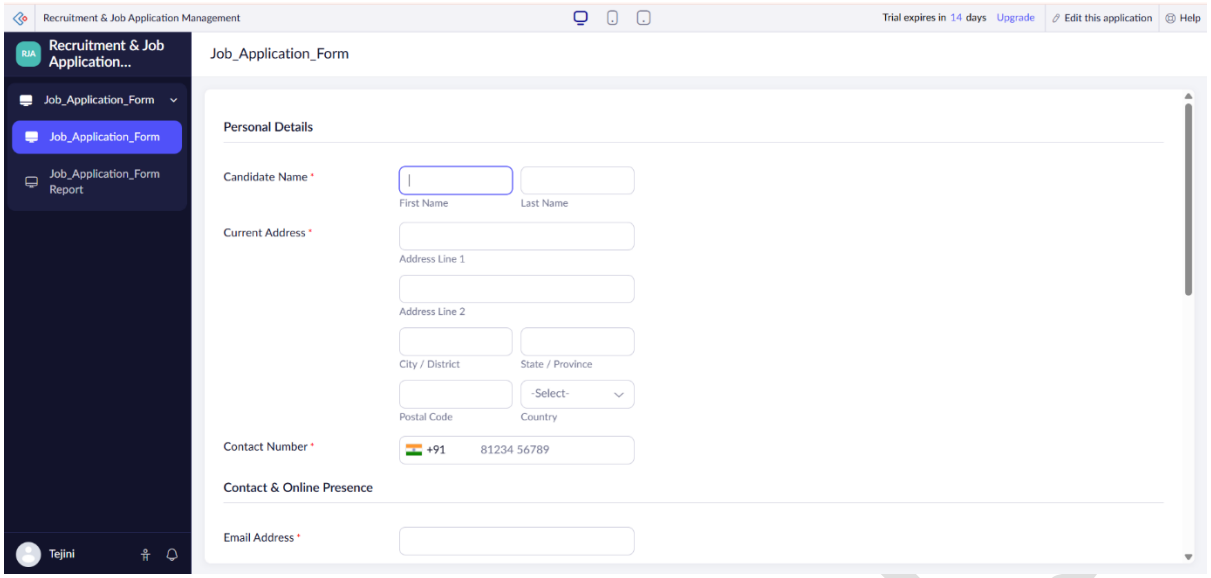

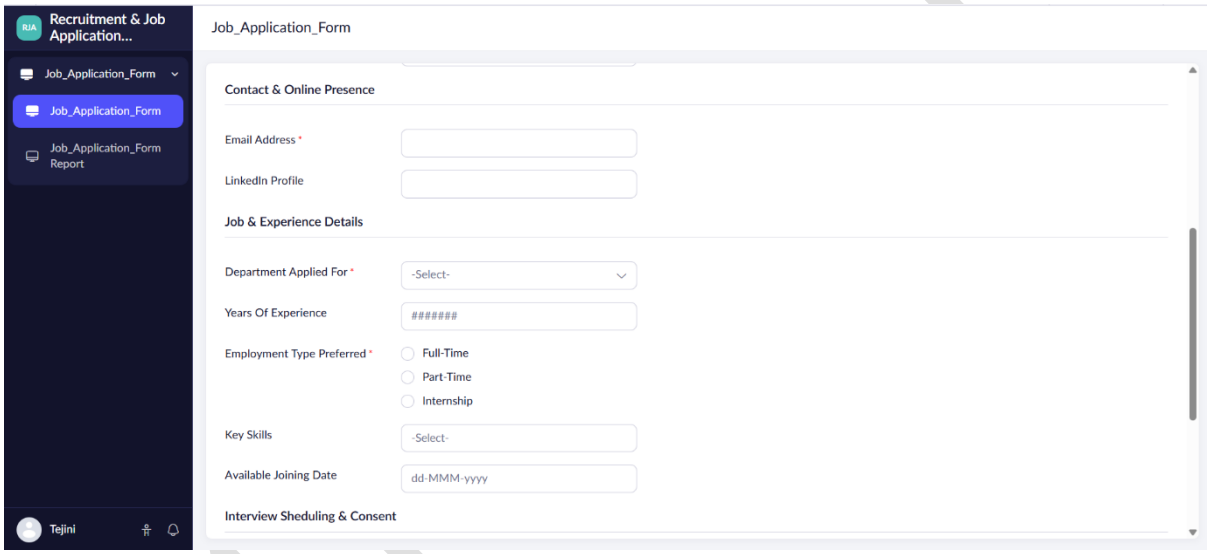

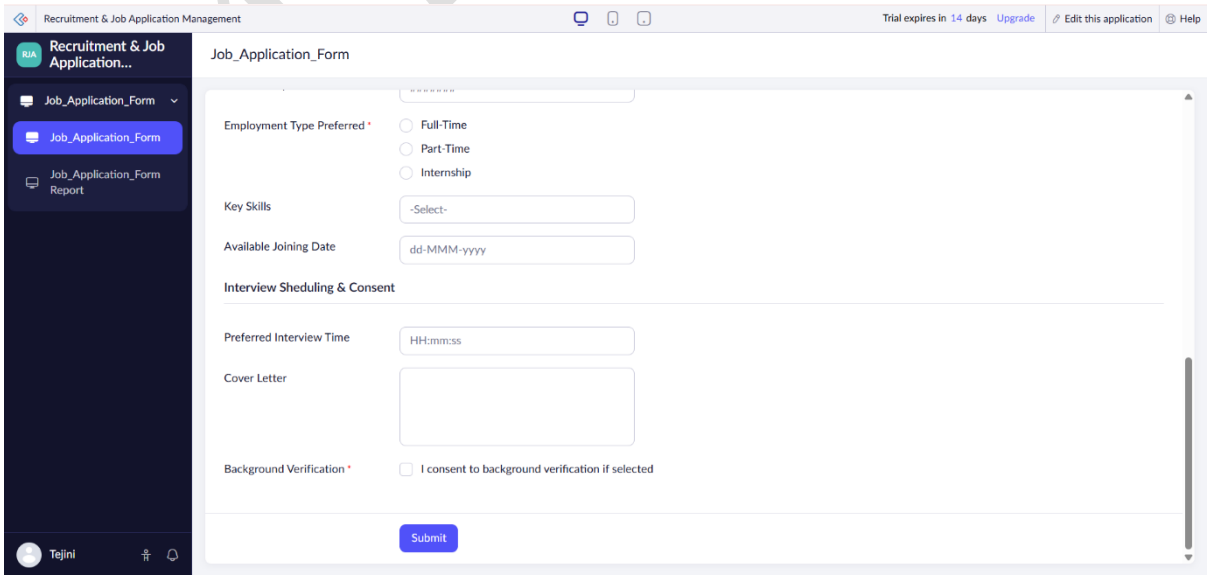

7.2 Live Preview

Shows the completed Job Application Form in Live Preview with the configured sections, fields, and validation requirements.

7.3 Report View

Displays the submitted job application records in the generated report view.
The report contains the sample candidate records submitted during testing and provides filtering options for **Department Applied For** and **Key Skills**.

8. RESULT

The **Recruitment & Job Application Management** application was successfully designed and implemented in Zoho Creator using all **13 required Basic Fields**, appropriate field-level validations, a functional report view, and a documented Entity-Relationship data model.
The application successfully captures candidate personal details, contact information, job preferences, experience, skills, interview scheduling details, and background-verification consent. Submitted applications are stored in the report view, where they can be reviewed and filtered based on department and key skills.
